G

1

2

$$G_1^{-1}$$

G₁

S

A teal rounded square icon with a white letter 'S' in the center.

S

G_2'

$$G_2^{-1}$$

canonically for n

WILLIAMS

Generate canonical rules only generate pair (L,R) instead of 4 terms!

AGNON: Ruie

LS = SR

How we solve the explosion

Canonical form

$([L], [R])$

A Canonical Rule

$L;S = S;R$

Generate canonical rules only enumerate one pair (L,R) instead of 4 terms!

Symbolic rule synthesis

Native Proposal

1. **Enumerate** representative pairs (L, R) within different equivalence groups in concrete synthesis
2. **Solve** the equation $L;S = S;R$

Expensive!
